

Year 2: Habitats Knowledge Mat

Subject Specific Vocabulary		Interesting Books	Sticky Knowledge	
dinosaur	Dinosaurs were the main animals on Earth for more than 150 million years. They were lizard-like reptiles.	Paris de la constante de la co	about habitats A habitat is a place that an	
indigenous	Produced, growing, living, or occurring naturally in a particular region or environment.	OO	animal lives. It provides the animal with food, water and shelter.	
rivers	A river is a flowing, moving stream of water. Usually a river feeds water into an ocean, lake, pond, or even another river.	Meerkat 1	 □ There are many different sorts of habitats around the world from forests to grasslands and from mountain slopes to deserts. □ Animals like cockroaches are really important in a habitat they eat the dead plants and recycle the nutrients back into the soil. 	
woodland	Woodland is a low-density forest with plenty of sunlight and limited shade.	Mail		
ponds	A pond is a body of water smaller than a lake. Ponds support a very wide range of wildlife.	Emily Gravett		
sea	A sea is part of the ocean partially enclosed by land. Seas are found on the margins of the ocean and are partially enclosed by land.	Important facts to know by the end of the habitats topic:		
		 know how a specific habitat provides for the basic needs of 	People are causing harm to many habitats. Forests are being burnt down, lakes and rivers polluted and the polar ice caps	
rainforest	Tropical rainforests are forests with tall trees, warm climates, and lots of rain.	things living there		
desert	A desert is any large region that gets very little rain each year. Very few plants	 identify and name plants and animals in a range of habitats 	are melting.	
species	or animals live in desert areas. A group of animals, plants or other living things that all share common characteristics and that are all classified as alike in some manner.	match living things to their habitat	☐ Because resources like water and food may be limited, plant and animal species often compete with each other for food and water.	
- P - 2 - 2 - 2 - 2 - 2 - 2 - 2 - 2 - 2		know how animals find their food		
microhabitats	Microhabitats are the small-scale physical requirements of a particular organism or a community of organisms.	name some different sources of food for animals	Because the Earth is always changing, habitats are constantly changing.
